

THE FULL BREATH SLEEP APPLIANCE

The Full Breath Sleep (FBS) Appliance is an effective comfortable one arched mouthpiece that is the easiest to wear and most successful sleep appliance available. It provides the dentist with AN **INCREDIBLE TOOL** to change people's lives. You can save lives and provide your patients with a longer healthier life by establishing a good airway. You can help marriages stay together by curing the matrimonially destructive effect of snoring. With the Full Breath System you save lives and provide a path to more vital and happy living.

Dentistry has been provided many avenues for providing improved health to the public. But never before has Dentistry and each individual dentist been provided with a treatment modality like the Full Breath Sleep Solution to aid people worldwide to live longer and more healthful lives. The Baby Boomers are in the midst of a poor sleep epidemic. Their poor unfit sleep and the lack of air to the body that accompanies the poor sleep leaves them constantly fatigued. Their entire cardiovascular systems are at greater risk due to the demands of the more intense effort to supply the body with O2 despite low levels of O2 resulting from their sleep apnea. And they are at greater risk of Alzheimer's due to O2 deprivation to the brain from the apnea. 27% of all married couples over 40 sleep in separate bedrooms due to the disturbing nature of the loud snoring. We have the ability to provide a solution to all these problems. As a dentist you can provide people with the most meaningful help you have ever delivered. Dentistry has been elevated to a new level, we now provide life saving changes!

The Full Breath Solution presents many avenues of treatment. It offers the dentist freedom to use numerous avenues to treat the patients snoring and OSA. It becomes an art form. It has been said that the application of science is an art. This has never been truer than in working with the Full Breath Solution.

There have been 4 stages of evolution of this appliance:

FB1, FB2, FB3. and the FBPTR. All four received FDA approval:

The FBS1 was granted approval in 2004

The FBS2 (Full Breath Sleep Appliance Anterior Bite) was granted FDA approval in Dec. 2005.

The FBS3 (Full Breath Sleep Appliance Posterior Bite) was granted FDA approval in Jan. 2006.

The FBSPTR was granted FDA approval May 2006.

The Anterior Tongue Restraint was granted OK as an addition to the FBS in Feb. 07.

59 cases were submitted to the FDA for these approvals. A highlight of the data for these cases treated with one of the Full Breath Solutions showed:

RESULTS OF 59 CASES SUBMITTED TO FDA FOR FULL BREATH CERTIFICATIONS

1. Results of all 59 cases, Pre & Post Tx. Sleep test AHI/RDI's:

PRE - TX AHI / RDI	POST - TX AHI / RDI	% DROP AHI / RDI	AHI is the number of 10 sec to 90 sec episodes of no ait reaching the lungs per hour
36.1	13.4	63%	

The net result of this data shows a 63% drop in the AHI.

2. Of the 59 cases submitted to the FDA, 15 cases had outstanding results and these are:

PRE - TX AHI / RDI	POST - TX AHI / RDI	% DROP AHI / RDI
42.3	6.9	83.7 %

The net results of these 15 cases (25% of cases submitted for FDA approval) showed an 83.7% drop in the AHI/RDI.

What does this data mean? With an overall AHI/RDI drop of 83% on the outstanding cases, and 63% on all cases submit to the FDA, we have the most effective and comfortable oral sleep appliance available to treat snoring and CPAP intolerance. You have the chance to provide life changing avenues for your patients!
